# Public Sector Formula Specifications (RAG Optimized)

**Document Type:** Functional Design Specification: Derived Liability & Additional Calculations
**Domain:** Oracle Siebel CRM Public Sector Rule Config
**Target Use Case:** Vector Database Ingestion (RAG) & Calculation Applet Reference
**Rounding Convention:** Standard Currency (2 Decimals) for all calculated outputs.

**RAG Processing Note:** This document contains strictly structured key-value pairs mapping operational mathematical formulas to their respective UI locations within the Oracle Siebel CRM interface. Each component maps to a specific applet or view for data extraction.

## Formula 00: Base Operational Model (OGM)

*The core operational rule framework from which all other derived formulas scale natively.*

```
OGM = (Daily Liability * Number of Days) / Number of Periods
```

| Component | Description | UI Location (Screen / Applet) |
| --- | --- | --- |
| **OGM** | The calculated core assessment total | **Financial Setup View > Core Assessment Applet** |
| **Daily Liability** | The base financial rate per day | **Calculation Applet > Daily Base Rate** |
| **Number of Days** | The duration for the assessment calculation | **Case Tracking Applet > Active Duration Span** |
| **Number of Periods** | The number of evaluation intervals. Note: Must be greater than zero. | **Calculation Applet > Evaluation Intervals** |

## Formula 21: Voluntary Overpayment Credit Allocation (VOCA)

*Calculates the amortized credit applied to future assessment cycles when an obligor makes voluntary payments exceeding their mandated daily liability.*

```
VOCA = (Daily Overpayment Credit * Unallocated Days) / Future Billing Cycles
```

| Component | Description | UI Location (Screen / Applet) |
|---|---|---|
| **VOCA** | Total credit to be applied to the next assessment | **Financial Case Summary View > Adjustments Applet** |
| **Daily Overpayment Credit** | The excess amount paid divided by the days it covers | **Payment Receipt Applet > Excess Allocation Field** |
| **Unallocated Days** | Number of days between the receipt of overpayment and the next review cycle | **Assessment Period Applet > Days to Next Review** |
| **Future Billing Cycles** | Remaining periods (monthly/weekly) in the active financial year | **Calculation Applet > Periods Remaining** |

### Formula 22: Statutory Minimum Escalation Buffer (SMEB)

*Computes the mandatory incremental increase to core liabilities when statutory minimum maintenance limits are updated by legislative changes.*

```
SMEB = (Daily Minimum Threshold * Escalation Window Days) /
Annual Assessment Periods
```

| Component | Description | UI Location (Screen / Applet) |
|---|---|---|
| **SMEB** | The escalated liability value applied to the current case | **Liability Assessment Applet > Escalation Total** |
| **Daily Minimum Threshold** | The new statutory base rate applicable per day | **Administration Administration > Statutory Limits List Applet** |
| **Escalation Window Days** | Days from the legislative effective date to the annual review | **Case Tracking Applet > Active Window Tracker** |
| **Annual Assessment Periods** | Total billing intervals in the standard year | **Calculation Applet > Base Frequency** |

## Formula 23: Disputed Paternity Escrow Hold (DPEH)

*Calculates the financial liability to be legally withheld in an escrow state pending the outcome of a formal DNA or judicial paternity investigation.*

```
DPEH = (Daily Withheld Liability * Investigation Days) / Escrow Holding Intervals
```

| Component | Description | UI Location (Screen / Applet) |
|---|---|---|
| **DPEH** | The total amount to be frozen in the system ledger | **Escrow Management View > Paternity Hold Applet** |
| **Daily Withheld Liability** | The standard OGM rate temporarily paused | **Calculation Applet > Daily Liability (OGM Base)** |
| **Investigation Days** | Estimated duration of the legal hold period | **Legal Proceedings Applet > Projected Duration** |
| **Escrow Holding Intervals** | Number of financial sweeps paused during the hold | **Financial Setup Applet > Hold Cycles** |

### Formula 24: Cross-Jurisdictional Tax Intercept (CJTI)

*Evaluates the proportion of an annual state tax return that must be intercepted and applied against aggregate enforcement arrears across border regions.*

```
CJTI = (Daily Tax Offset Variance * Fiscal Year Span) / Tax Intercept Cycles
```

| Component | Description | UI Location (Screen / Applet) |
|---|---|---|
| **CJTI** | Total expected tax offset collection amount | **Enforcement Assessment View > Tax Offset Applet** |
| **Daily Tax Offset Variance** | The daily amortized value of the target tax return | **External Interfaces Applet > Tax Revenue Feeds** |
| **Fiscal Year Span** | Total days in the targeted tax reporting year | **Financial Calendar Applet > Fiscal Days** |
| **Tax Intercept Cycles** | Number of batches required to process the sweep | **Batch Administration View > Intercept Jobs** |

### Formula 25: Shared Custody Expense Equalizer (SCEE)

*Determines the proportional liability reduction for a non-resident parent when certified overnight custody passes a statutory threshold (e.g., 50+ nights).*

```
SCEE = (Daily Equalization Rate * Shared Nights) / Custody Review Quarters
```

| Component | Description | UI Location (Screen / Applet) |
|---|---|---|
| **SCEE** | The final credit deduction applied to the gross liability | **Assessment Case View > Custody Equalization Applet** |
| **Daily Equalization Rate** | The calculated per-night financial relief factor | **Statutory Rules Administration > Custody Credit Applet** |
| **Shared Nights** | Verified count of overnight stays per year | **Contact Management Applet > Shared Care Log** |
| **Custody Review Quarters** | Number of review periods remaining in the case cycle | **Calculation Applet > Remaining Quarters** |

## Formula 26: Temporary Unemployment Relief Subsidy (TURS)

*Computes the mitigated downward adjustment to liability when an obligor registers a verified claim for state unemployment benefits.*

```
TURS = (Daily Relief Subsidy * Verified Jobless Days) / Relief Grant Blocks
```

| Component | Description | UI Location (Screen / Applet) |
| --- | --- | --- |
| **TURS** | Total adjustment downward to the active assessment | **Financial Adjustments View > Hardship Relief Applet** |
| **Daily Relief Subsidy** | The maximum daily discount permitted for unemployed status | **Rules Administration > Benefit Subsidy Matrix** |
| **Verified Jobless Days** | Number of days covered under the unemployment claim | **Employment History Applet > Gap Duration Days** |
| **Relief Grant Blocks** | Assessment cycles impacted by the unemployment status | **Calculation Applet > Adjustment Periods** |

## Formula 27: Automated Bank Levy Processing Fee (ABLF)

*Calculates administrative cost recovery charges generated when the system automatically isolates and seizes funds from a commercial bank account.*

```
ABLF = (Daily Processing Surcharge * Bank Action Days) / Levy Execution Tiers
```

| Component | Description | UI Location (Screen / Applet) |
|---|---|---|
| **ABLF** | Total fee appended to the obligor's debt balance | **Enforcement Financials View > Surcharge Applet** |
| **Daily Processing Surcharge** | The amortized cost of the automated interface run | **Batch Configuration Applet > Interface Cost Metrics** |
| **Bank Action Days** | Number of days the lien was actively maintained | **Asset Management Applet > Lien Tracking Days** |
| **Levy Execution Tiers** | The complexity multiplier based on the bank's processing tier | **Financial Institutions Applet > Tier Rating** |

### Formula 28: Arrears Debt Compounding Penalty (ADCP)

*Applies an escalating financial penalty to long-term unresolved debt that has bypassed all standard negotiation and tracking steps.*

```
ADCP = (Daily Compound Rate * Delinquency Span) / Late Fee Intervals
```

| Component | Description | UI Location (Screen / Applet) |
|---|---|---|
| **ADCP** | The compound interest total added to the arrears balance | **Debt Management View > Penalty Calculations Applet** |
| **Daily Compound Rate** | Statutory interest rate divided by 365 | **System Preferences Applet > Statutory Interest Rate** |
| **Delinquency Span** | Total days the debt has remained in 'Severe' status | **Arrears Tracking Applet > Days Delinquent** |
| **Late Fee Intervals** | Number of compounding periods (typically monthly=12) | **Calculation Applet > Compounding Frequency** |

### Formula 29: Emancipation Transition Proration (ETP)

*Prorates the final liability amount for a child aging out of the public sector system during the middle of an active financial calculation year.*

```
ETP = (Daily Transition Liability * Remaining Minority Days) / Final Year Assessment Blocks
```

| Component | Description | UI Location (Screen / Applet) |
|---|---|---|
| **ETP** | The final, truncated liability total before case closure | **Case Closure View > Transition Assessment Applet** |
| **Daily Transition Liability** | The standard OGM rate leading up to emancipation | **Calculation Applet > Daily Liability** |
| **Remaining Minority Days** | Days from calculation date to the child's 18th/19th birthday | **Dependent Profile Applet > Days to Emancipation** |
| **Final Year Assessment Blocks** | The remaining periodic billing runs before closure | **Calculation Applet > Final Year Periods** |

### Formula 30: Medical Premium Reimbursement Allowance (MPRA)

*Calculates an offsetting allowance when the non-resident parent provides primary private healthcare coverage for the dependent.*

```
MPRA = (Daily Medical Premium * Coverage Days) / Insurance Billing Cycles
```

| Component | Description | UI Location (Screen / Applet) |
|---|---|---|
| **MPRA** | Total liability reduction applied to account for healthcare costs | **Health Insurance View > Reimbursement Applet** |
| **Daily Medical Premium** | Annualized cost of the policy portion for the child, divided by 365 | **Policy Details Applet > Amortized Daily Cost** |
| **Coverage Days** | Days the policy is active during the financial year | **Policy Tracking Applet > Active Coverage Span** |
| **Insurance Billing Cycles** | Number of periods aligning the insurance to the maintenance plan | **Calculation Applet > Alignment Periods** |
